  - Increase the system volume.

Getting Started

Installation

Before you begin, make sure you have the application installed on both your PC and your mobile device.

- Download and install the Remote PC Controller on your PC.
- Install the mobile app on your Android device from the GitHub release.

Starting the Server

To use the remote-control features, you need to start the server on your PC.

- Launch the Remote PC Controller application on your PC.
- Click the "Start App" button to initiate the server.

Using the Mobile App

Open the App

Once the server is running, you can use the mobile app to control your PC.

- Launch the Remote PC Controller app on your Android device.
- Type the IP Address that is shown on the PC application after clicking start server.
- Then click start.
- Now you can try functions by clicking the buttons.

Stopping the App

When you're done using the remote-control features, you can stop the server.

- Click the "Stop App" button in the PC application.
- This action will terminate the server, and the app status will change to "Not Running."

Accessing the Server

You can access the server's home page directly from the PC app.

- Click the "Open Server Home Page" link on the PC app.
- This will open your default web browser to the server's home page.

Troubleshooting

If you encounter any issues, please check the Discussions section in the GitHub repository for solutions to common problems.

Feedback and Support

Your feedback is valuable! If you have any questions, suggestions, or encounter issues, please reach out to us:
